Competition Name

Web Design Competition

Submission Date

10 June, 2083 B.S.

1.Brief Description

Janata Report is a web-based civic issue reporting platform designed to help citizens report public problems such as road damage, electricity issues, water supply failures, garbage problems, and streetlight malfunctions.

The system allows users to submit complaints by providing essential information including their phone number, location, issue description, and supporting images. Submitted complaints can then be reviewed and managed by administrators to ensure proper resolution and transparency.

2.Target Audience

- Citizens of Nepal
- Local Municipalities
- Service Departments (Electricity, Water, Road Maintenance)
- Community Administrators

Objectives

- Provide a simple and accessible platform for reporting civic issues.
- Improve communication between citizens and local authorities.

- Increase transparency in complaint management.
- Reduce response time for public service issues.
- Digitize municipal complaint reporting and tracking.

3. Design Process

Requirement Analysis

Many civic issues in local communities remain unreported or unresolved because citizens lack a proper digital reporting mechanism. Janata Report addresses this problem by providing a centralized online platform where users can easily report and track public issues.

Pages Included

- Home
- About Us
- Dashboard
- Emergency Contacts
- Login

About Us Page

The About Us page provides information about:

- The purpose of the platform
- The mission of improving civic communication
- Benefits for citizens and local authorities
- Information about the Misfits development team

User Interface Design

The user interface was designed with simplicity and accessibility in mind.

Design Goals

- Clean and professional layout
- Government-style civic service appearance
- Responsive design for all screen sizes
- Easy navigation and accessibility
- Status-based visual indicators

Color Palette

Color	Purpose
Blue (#1e3a8a)	Trust and Authority
White (#ffffff)	Clean Background
Light Yellow (#facc15)	Highlights and Warnings
Red (#ef4444)	Alerts and Urgent Issues

Font: Poppins & Roboto — modern, readable, and accessible across all screen sizes

4. Features

Citizen Features

- Submit complaints with complete issue details
- Upload supporting images
- Provide mandatory phone number
- Capture current location
- View complaint status and updates

Admin Features

- View all submitted complaints
- Manage reports efficiently
- Update complaint status

Status Types

- Pending
- In Progress
- Resolved

Login System

The platform includes separate interfaces for:

- Citizen Login
- Admin Login

This separation allows users and administrators to access their respective dashboards while keeping the system simple for demonstration purposes.

5. Complaint Form Structure

Each complaint contains the following fields:

- Full Name (Required)
- Phone Number (Required)
- Category
 - Electricity
 - Water Supply
 - Road Damage
 - Garbage Management
- Issue Title
- Description
- GPS Location
- Image Upload

6. Technologies Used

Frontend Technologies

- HTML5
- CSS3
- JavaScript

Development Tools

- Visual Studio Code

7. Data Handling

For this prototype version, complaint data is stored locally using browser LocalStorage.

Stored Information

- Complaint ID
- User Name
- Phone Number
- Category
- Title
- Description
- Status
- Latitude
- Longitude

This approach enables data persistence without requiring a backend server.

8. Challenges Faced

Challenges	Solutions
Creating a civic-focused design that appears both professional and user-friendly.	Used a clean layout, consistent color scheme, and intuitive navigation.
Obtaining user location while ensuring a smooth experience.	Implemented browser Geolocation API integration.
Managing complaint records in a frontend-only environment.	Utilized LocalStorage to simulate database functionality
Ensuring compatibility across desktop, tablet, and mobile devices.	Applied responsive layouts using modern CSS techniques.

9. Future Enhancements

The project can be expanded with the following features:

- Backend database integration
- User authentication system
- Real-time complaint tracking
- Government authority integration
- Mobile application version
- Email and SMS updates
- Complaint analytics dashboard
